(54) A sealing washer

(57) The invention concerns a device for sealing off a ring - formed opening between the rings in a ball bearing.

According to the invention the device is designed like a washer (9) comprising an outer flange (10) and an inwardly protruding waist (11), which ends with a contact surface (12) arranged to bear against the inner ring (5) of the ball bearing. The waist (11) will then cover the distance between the inner and outer rings of the ball bearing. The washer (9) is attached to and sealed against a surrounding bearing housing (7).

**ANNEX TO THE EUROPEAN SEARCH REPORT  
ON EUROPEAN PATENT APPLICATION NO.**

EP 99 85 0027

This annex lists the patent family members relating to the patent documents cited in the above-mentioned European search report.  
The members are as contained in the European Patent Office EDP file on  
The European Patent Office is in no way liable for these particulars which are merely given for the purpose of information.
